

16TH MARCH 2020

Dear Valued Customer,

In November 2019 the 3AA CPO Underwater Kinetics eLED Torch (UKT10034+) underwent design changes required to gain certification under the revised standard UL913 Edition 8.

These changes resulted in an increase in torch body width of approximately 1mm. This change in size has made the B2066114 Underwater Kinetics torch clip firmer fitting.

The current clip (B2066114) still fits to the Underwater Kinetics 3AA however, the tighter fit and takes more force than with the previous model of the torch.

We understand that this change in fit may cause some frustration. To overcome this issue the torch holder has been adjusted to suit. The updated design, B2066146, will be available in the coming weeks and eventually replace the current model.

The new clip will have a slightly larger cavity to accommodate the change in body size of the 3AA CPO Underwater Kinetics eLED Torch (UKT10034+). It will continue to fit the other torches in the Underwater Kinetics range (Red Herculite eLED Torch 4AA Underwater Kinetics UKT514609-7A+ & eLED Torch 4AA Underwater Kinetic UKT14506).

Please contact your Pac Fire territory sales manager if you require further information.
