

27TH JULY 2020

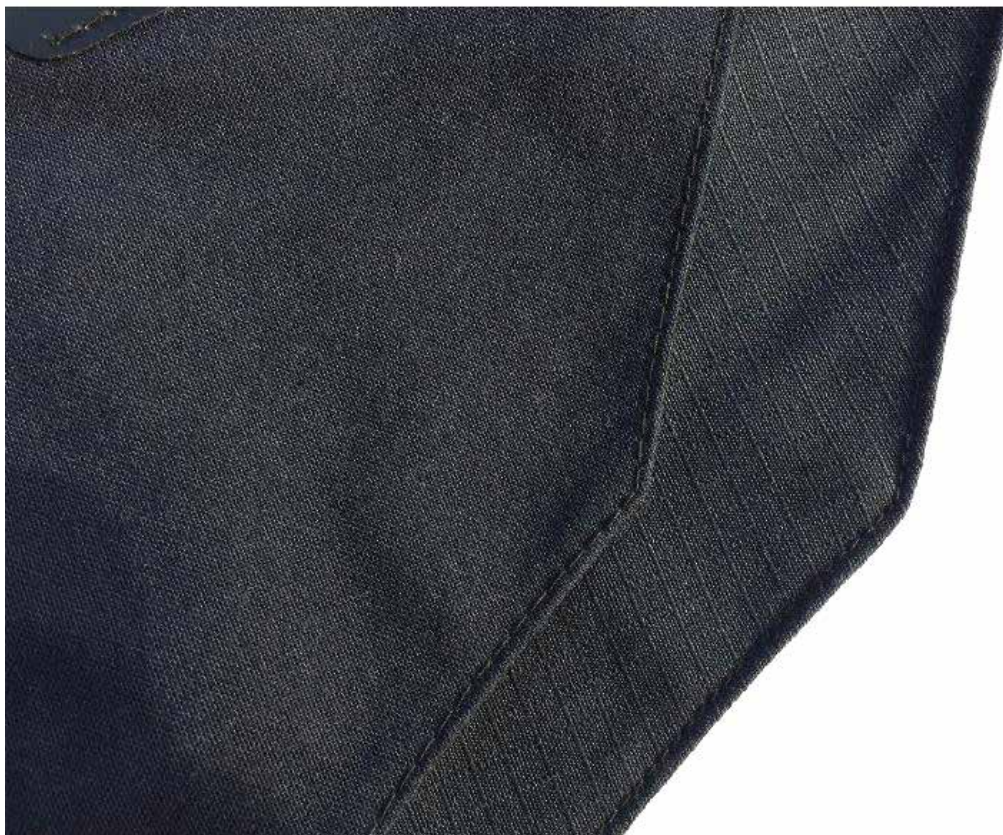

Dear Valued Customer,

The standard Nomex® used in black Neck Protectors sold with a selection of structural firefighting helmets (select models of F10 MkV, F11 & F15) is changing due to ongoing availability issues from our supplier. Previously Nomex® Neck Protectors were made from 260gsm plain weave fabric, effective immediately they will now be manufactured from a 200gsm Ripstop weave fabric.

The new 200gsm 100% Nomex® fabric has been tested by a third-party independent laboratory and has been found to have the excellent flame retardancy properties expected from Nomex® fabric. The Ripstop weave gives a grid pattern and enhanced tensile strength performance to the material not seen in our previous fabric.

OLD 260GSM NOMEX®

NEW 200GSM NOMEX®

Please contact your Pac Fire territory sales manager if you require further information.
