

The Pac Fire Mesh Face Shield is an accessory for Pacific R5 series helmets with earmuffs fitted and a front brim.

## ASSEMBLING THE FACE SHIELD

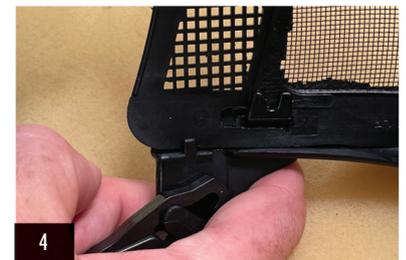

Your Mesh Face Shield will arrive in two pieces. The holder and the mesh face shield.

1. Feed the first hook on the holder through the slot in the face shield.
2. Press the circle lug on the holder through the face shield piece.
3. Attach the face shield to the last hook on the holder.
4. Ensure the Face Shield part is sitting within the channel of the holder on either side of the hooks.

## FITTING EARMUFFS

5. Insert the earmuff tongue into the earmuff bracket. Push down firmly until it locks into place.

## FITTING THE MESH FACE SHIELD

6. The mesh face shield fits to the helmet by inserting the holder's arms into the slots in the earmuffs.
7. Line up the arms first by placing them through the earmuff slot in either side of the helmet.
8. After the face shield is aligned, push the arm of the face shield holder firmly into the slot in the earmuff.

## REMOVING THE MESH FACE SHIELD

9. Grip the arm of the face shield holder firmly and pull out of the slot in the earmuffs.
10. If the arms do not slide out of the earmuffs while attached to the helmet, remove the Mesh Face Shield with the earmuffs. Grip the top of the earmuff arm, then with your other hand push down on the black plastic tab protruding from the earmuff bracket.
