

PREMIUM PROTECTION AGAINST FLASHOVER AND PARTICULATES

The PBI® NanoFlex particulate blocking flash hood from Bristol Uniforms balances superior flashover protection with insulation from potentially harmful particulates found on the fire ground.

Recent studies into firefighter health and well-being suggest that the flash hood is the most penetrable piece of protective clothing worn by the firefighter, a particularly troubling finding considering the face and neck have been identified as areas of significant dermal exposure to potential carcinogens.

Bristol Uniforms revolutionary NanoFlex flash hoods have been proven to be 99.8% successful at filtering harmful particulates while remaining lightweight, soft and breathable while minimal sound is produced through head movement resulting in greater situational awareness for the firefighter.

BRISTOLHOOD7
LARGE FIT

CERTIFICATIONS

EN13911:2017

FABRIC

PBI® and Kevlar® fibres with viscose in a knitted fabric featuring Dupont NanoFlex fabric

DESIGN

Head design: Separate head with sewn on back and front bib
Back of head: ends at the nape of the neck for improved fit and comfort

CONSTRUCTION

Head Seams: All head and bib seams are sewn with a flat lock stitch

THREAD

100% Nomex®

LABELS

Each hood is labelled with a label with all four label edges sewn to the hood, identifying material contents, certification, lot#, date of manufacture, and care instructions.
